

FlexiCV

responsive vCard template

Hey !

First of all we would like to thank you for purchasing FlexiCV, if you need any help feel free to mail us at flexicv@uou.ch we will do our best to get back to you within 24 hours.

About FlexiCV

FlexiCV is a responsive vCard with a fresh & modern design. The HTML template offers 3 versions that include different layouts, colors and profile content structur (PSDs are included)

If you want to activate the red version then simply change the name of the file "index-red.html" into "index.html" (same thing applies if you want to choose the blue or green version).

Files and Folders structure

This template has the following structure of folders:

/root folder, contains template HTML files and this documentation

/css – folder containing CSS styles files

/js – java scripts to support template dynamics

/images – images required to properly render the template

/php – PHP script to handle contact form

/PSD – folder containing the PSDs

CSS files

style.css - main styles of the template including responsive styles

jquery.fancybox.css - zooming functionality for images, html content and multi-media.

reset.css - reset stylesheet to reduce browser inconsistencies in things like default line heights, margins and font sizes of headings, and so on.

color-blue.css – styles specific to blue version of the template

color-green.css – styles specific to green version of the template

color-red.css – styles specific to red version of the template

FlexiCV responsive vCard template

Java Scripts Files

Custom.js – main scripts for the template

jquery.min.js - jQuery is a fast, small, and feature-rich JavaScript library. It makes things like HTML document traversal and manipulation, event handling, animation, and Ajax much simpler with an easy-to-use API that works across a multitude of browsers.. More information can be found at <http://jquery.com/>

jquery.adipoli.min.js – simple jQuery plugin used to bring stylish image hover effects

jquery.easytabs.min.js - lightweight jQuery plugin to provide full tab functionality, while leaving the styling up to you. More information can be found at <http://os.alfajango.com/easytabs/>

jquery.fancybox.pack.js - FancyBox is a tool that offers a nice and elegant way to add zooming functionality for images, html content and multi-media on your webpages. It is built on the top of the popular JavaScript framework jQuery and is both easy to implement and a snap to customize. More information can be found at <http://fancyapps.com/fancybox/>

jquery.gmap.min.js - jQuery plugin that helps to embed Google Maps into website. More information can be found at <http://labs.mario.ec/jquery-gmap/>

jquery.hashchange.min.js - jQuery plugin enables very basic bookmarkable #hash history via a cross-browser HTML5 window.onhashchange event. More information can be found at <http://benalman.com/projects/jquery-hash-change-plugin/>

- jquery.isotope.min.js - an exquisite jQuery plugin for magical layouts. More information can be found at <http://isotope.metafizzy.co/>

Respond.min.js - a fast & lightweight polyfill for min/max-width CSS3 Media Queries. More information and source code can be found here:
<https://github.com/scottjehl/Respond>

response.min.js - a jQuery plugin that provides tools for building performance-optimized, mobile-first responsive websites. Its breakpoint sets use HTML5 data attributes to dynamically swap markup based on breakpoints so that rich content can be served progressively. Its API includes cross-browser event hooks, HTML5 dataset, and ways to get or test responsive properties. More information can be found at <http://responsejs.com/>

FlexiCV responsive vCard template

PHP Contact Form

Folder PHP contains PHP scripts to handle mail sending from the contact form. It contains PHPMailer module in the subfolders PHPMailer_v2.0.4 and PHPMailer-master, these files

should not be edited, message template and configuration file to set up to which address the message should be sent and which SMTP server to use.

Configuration

File config.php contains configurable parameters which are self-explanatory.

File mail.php located in the templates subfolder defines the template of email message which will be sent by the site. It has three variables: \$name, \$website and \$message which contains values entered by the user in the contact form. Edit this file to customize what email message will contain.

Location

To define where the marker will be set on the map edit this line in the index-blue.html, index-green.html or index-red.html:

```
<div id = "contact-address">1234 Street<br/>Mountain View, CA  
94043</div>
```

This tag defines the address which Google map will be positioned to.

Browsers

Template is optimized for latest IE, Chrome, Safari, Firefox, Opera 14. Some effects do not work well in browsers Opera and IE 8, 9

Restricted Content

Template has 2 restricted plugins:

Isotope

Isotope may be used in non-commercial and personal applications for free.

For commercial applications, you may license Isotope with the purchase of a one-time fee per developer. Commercial licenses may be purchased at metafizzy.co.

Fancybox

FancyBox licensed under Creative Commons Attribution-NonCommercial 3.0 license.

You are free to use fancyBox for your personal or non-profit website projects. You can get the author's permission to use fancyBox for commercial websites by paying a fee.
